4x10.5x10.5	Countersink Drill 4x10.5 & Plug Cutter 10.5 mm	
4x12x12	Countersink Drill 4x12 & Plug Cutter 12 mm	

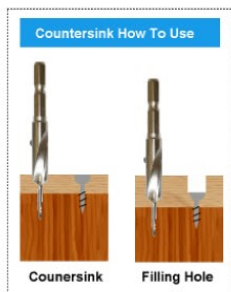

Usage :

This tool works very well to fill loose or broken knots in wood or to repair damaged spots. You can also make your own side-grain plugs, perfectly matched, from the wood of your choice.

Important:

To use the plug cutter, one needs to use a drill press and to clamp the wood firmly, as there is no pilot bit to guide the cutter. The counter sink can be used free hand. But, for instance when you must drill near a very small or loose knot, or in splintered wood, where the drill bit might wander, it is better to use a drill press, like with the plug cutter.

All cutters and countersinks have a shaft diameter of 6.35 mm (1/4 inch).
